Open Source Software included in FW prior to v15.1.0

FileWave is a device management solution that uses a variety of open source libraries and software (OSS) to provide its features and functionality. We believe in the importance of open source software and are committed to giving back to the community. By listing the open source software we use, we hope to make it easier for others to learn about and use these technologies, and to comply with the terms of the licenses for these software packages.

For versions below v15.1.0 there was a link on each download page that would go to the FileWave website. Starting with v15.1.0 we are publishing the list of OSS here in the Knowledge Base.
