

FileWave Engage End of Life

FileWave Engage reached end of life before FileWave 14.8. FileWave 14.8.0 removed the remaining Engage support and should not be used as an Engage deployment path.

What changed

FileWave 14.8.0 removed the remaining Engage functionality. Current supported FileWave releases do not include Engage.

Inventory and application impact

Reports or historical Inventory Queries that reference Engage data no longer return those retired fields. Review old reporting and automation before carrying it into a current environment.

Removed items

- EngageProfile inventory field
- EngageProfileStatus inventory field
- EngageX App Store application
