

Associate a Specific Fileset Revision

What

When a Fileset has revisions, FileWave Central asks which revision the new association should use. A Fileset without revisions follows the normal association workflow.

When/Why

For example, a Firefox Fileset might contain separate revisions for versions 79 and 80. Select the revision you want the target devices to install when you create the association.

How

Create the association in FileWave Central, then choose the required revision in the prompt shown below:

The default option follows whichever revision is marked as the Fileset's default. See "Default" Revisions below before using that option in production.
