

Desktop PKG and MSI Filesets

Special Filesets may be created for PKG and MSI installers. These will automatically instal the software on deployment activation. Simply dragging and dropping a PKG or MSI directly into the Fileset window view, will generate the necessary Fileset as required, without the need to use the New Fileset button.

File Level Filesets (including PKG and MSI Filesets) can be exported for transfer to another FileWave server. They can also be compressed and stored for future use or archived.
