

Fileset Groups

You can arrange Filesets into Groups for easier deployment workflows. Fileset Groups can be nested into other Fileset Groups, much like Client Groups. Once a Fileset Group is created by clicking the New Fileset Group button, existing Filesets may be dragged and dropped into the Group. Filesets and Fileset Groups cannot be cloned, so they can only reside in one Group at a time. Fileset Groups may be associated to a Client or Client Group.
