

# Search Criteria

## What

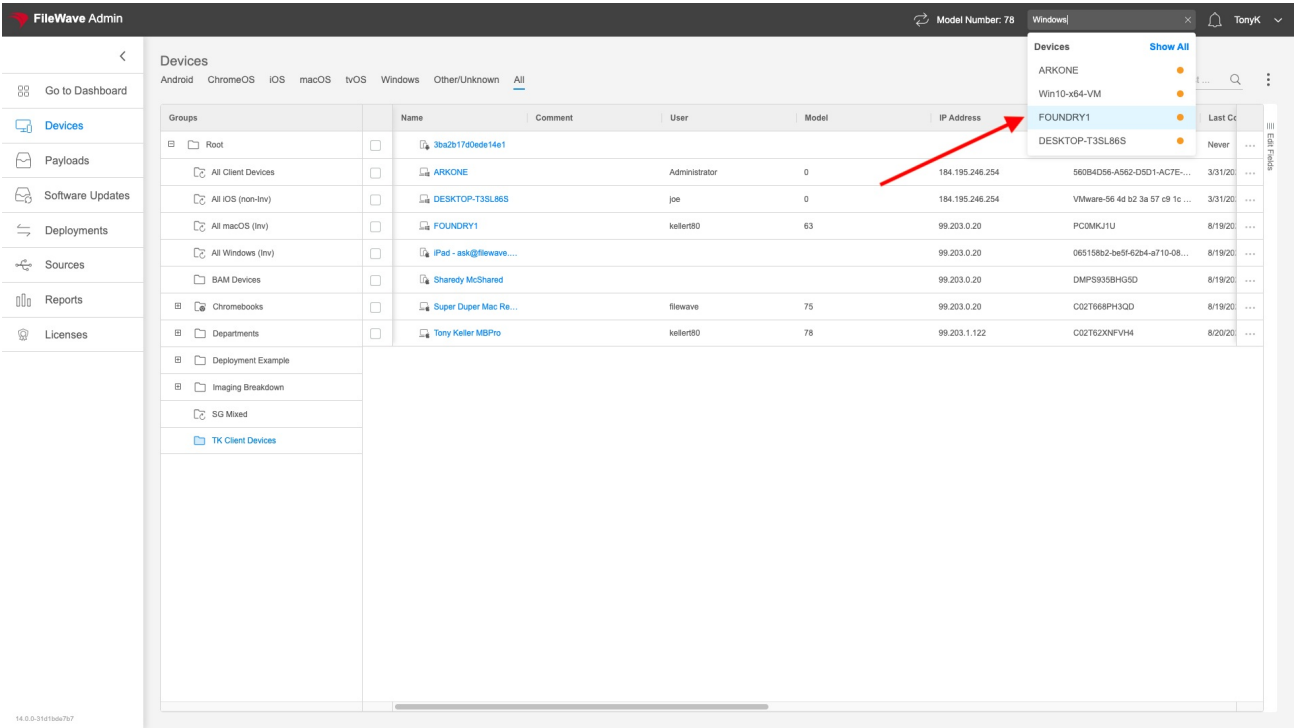

The general upper-right Search tool (  ) will search for devices from within any view in the FileWave WebAdmin.

## When/Why

We'll use this tool to quickly get to any device, from anywhere within the admin for those quick one-off support types of issues. We'll be adding more functionality to this search function over time.

## How

To search for a device, you can use the most common field values, such as device name, operating system name, and current username to isolate devices. Once the list appears, click on the device name to go to the device detail view:

Currently, this search does not search against additional fields that you have added to the client view, but we will be making improvements on this in future.
