

Search Criteria

What

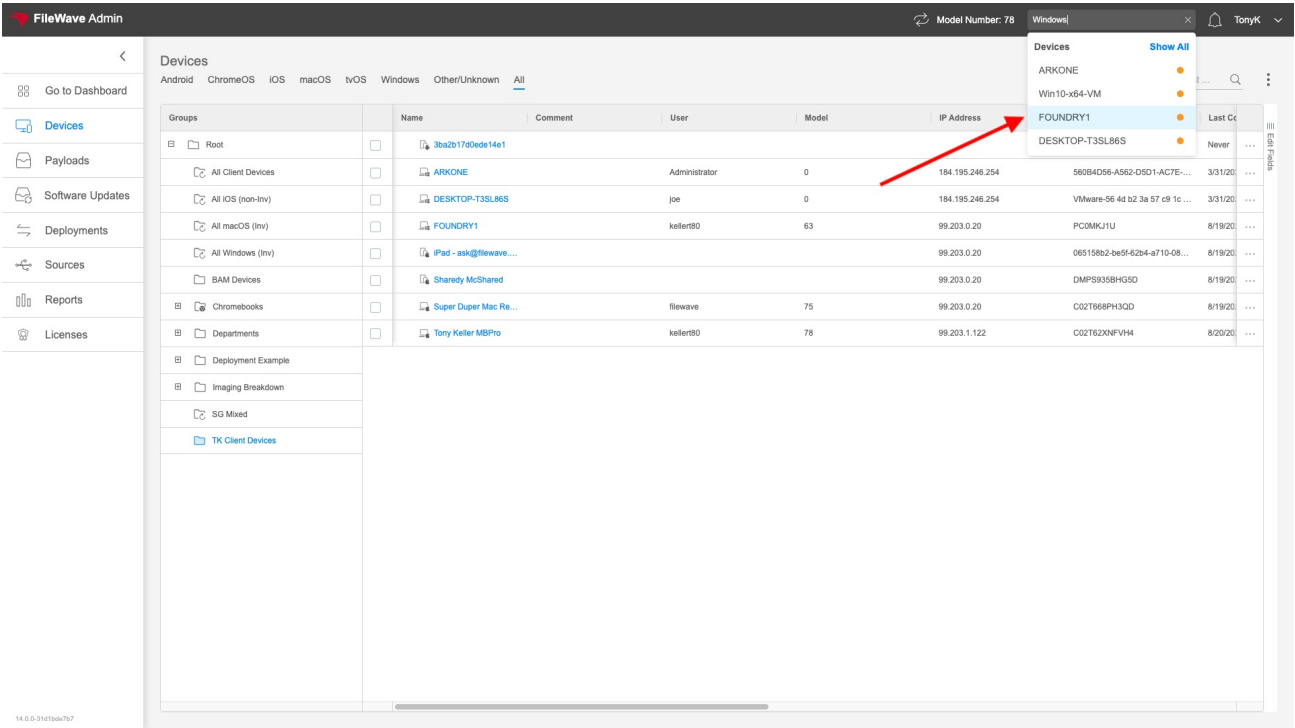

The general upper-right Search tool () will search for devices from within any view in the FileWave WebAdmin.

When/Why

We'll use this tool to quickly get to any device, from anywhere within the admin for those quick one-off support types of issues. We'll be adding more functionality to this search function over time.

How

To search for a device, you can use the most common field values, such as device name, operating system name, and current username to isolate devices. Once the list appears, click on the device name to go to the device detail view:

The screenshot shows the FileWave Admin interface. On the left is a sidebar with navigation links: Go to Dashboard, Devices, Payloads, Software Updates, Deployments, Sources, Reports, and Licenses. The main area is titled 'Devices' and has tabs for different operating systems: Android, ChromeOS, iOS, macOS, tvOS, Windows, Other/Unknown, and All. A search bar at the top right contains the text 'Search for Devices'. Below the search bar, a dropdown menu is open, showing a list of devices: ARKONE, Win10-x64-VM, FOUNDRY1 (highlighted), and DESKTOP-T3SL86S. A red arrow points from the 'FOUNDRY1' entry in the dropdown to the corresponding row in the table below. The table has columns for Groups, Name, Comment, User, Model, IP Address, and Last C... (Last Connected). The row for 'FOUNDRY1' shows it is a Windows device, model 63, with IP address 99.203.0.20, user keller80, and last connected on 8/19/20.

Groups	Name	Comment	User	Model	IP Address	Last C...
Root	3ba2b17d0ede14e1					
All Client Devices	ARKONE		Administrator	0	184.195.246.254	3/31/20...
All iOS (non-inv)	DESKTOP-T3SL86S		joe	0	184.195.246.254	3/31/20...
All macOS (inv)	FOUNDRY1		keller80	63	99.203.0.20	8/19/20...
All Windows (inv)	iPad - ask@filewave...				99.203.0.20	8/19/20...
BAM Devices	Shareddy McShared				99.203.0.20	8/19/20...
Chromebooks	Super Duper Mac Re...		filewave	75	99.203.0.20	8/19/20...
Departments	Tony Keller MBPro		keller80	78	99.203.1.122	8/20/20...

Currently, this search does not search against additional fields that you have added to the client view, but we will be making improvements on this in future.
