

Create a Smart Group from an Inventory Query (Report)

What

Smart group creation in FileWave has always been a duplicated effort if you wanted a smart group that was identical to an inventory query (report) that already existed. This duplication of effort was inefficient.

When/Why

With version 14+ of FileWave, you can now directly create a new smart group from an existing inventory query. (and the crowds cheered!)

How

Creating the smart group is easy:

- Right-click the Inventory Query you want to "copy" to a smart group
- Choose "Create Smart Group"
- Pick the destination where you want your smart group created

The newly created smart group will have no direct associations (deployments) assigned to it, but if you place it underneath a group that does have associations, the smart group will inherit them.

See example below:
