

Font Licenses

Many institutions or departments have purchased commercial fonts for use in their design, graphics, or marketing Groups. FileWave provides you with the ability to track and manage the use of license fonts. The workflow for setting up a font license is roughly the same as that for applications. First, you create and name the license; but this time, designate the expressions based on "font."

As with application licenses, when your licenses are in compliance, you will see a green "jelly" in the main License Management window. When you have crossed the watermark trigger point, the "jelly" turns yellow. Finally, when you are out of compliance, you will see red.
