Inventory-only Clients

Management Mode

A new flag has been added to computer Clients. It has two values: Managed (normal mode); and, Inventory only. To change Management Mode, right click on a client and select "Management Mode."

Inventory only

This setting allows you to have your client reporting data to FileWave, but will not be affected by any Filesets except for critical Filesets (for now, the only critical Filesets available are FileWave upgrade Filesets). Fileset status will report "Not installed, client is inventory only."
