

Windows MDM Software Updates CSP

What

What is CSP? A configuration service provider (CSP) is an interface to read, set, modify, or delete configuration settings on Windows devices, and the options available have been expanded in FileWave 14.8+ to include Microsoft Software Update management.

When/Why

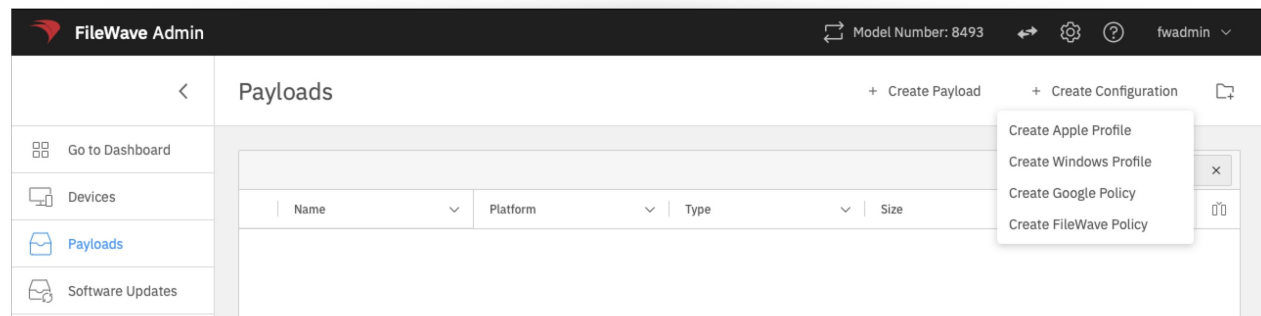

Windows profiles may be built via the FileWave Web Admin. Using this new CSP you can control many options around Windows Update on Microsoft Windows 10 and 11 devices.

 Microsoft Profiles are only available through the FileWave Anywhere

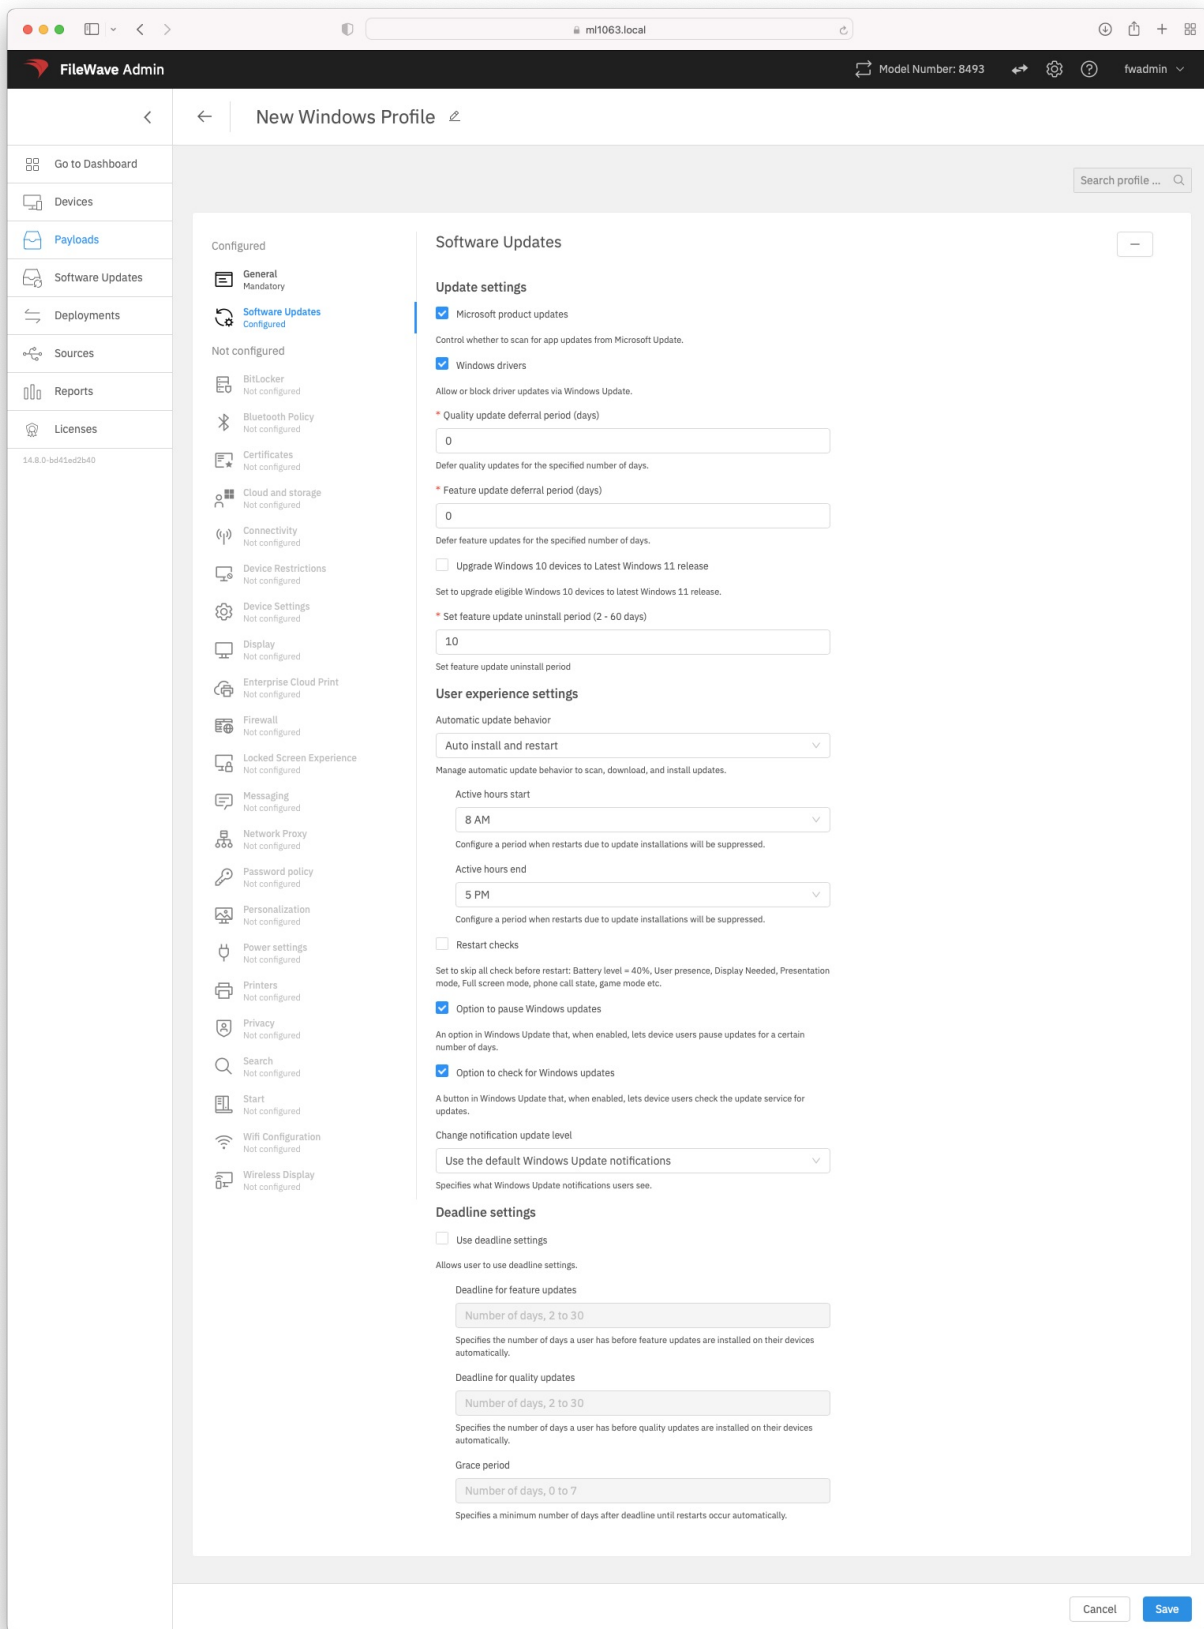

How

To build a Windows Profile, select:

- Payloads > Create Configuration > Create Windows Payload

As you go through configuring the Software Updates CSP you will see that each option is clearly explained and allows you easy control over the Software Update experience.
