

Moving the App Portal Web Clip using the Home Screen Layout Payload

To move the App Portal Web Clip using the Home Screen Layout Payload, locate the URL of the web clip from any iOS device settings:

- Settings App > General > Device Management > FileWave MDM > More Details

"Web Clip" as seen below:

The Web Clip address shown should be injected into the Home Screen Layout Payload, replacing the long string of characters and numbers at the end with %device_id% .

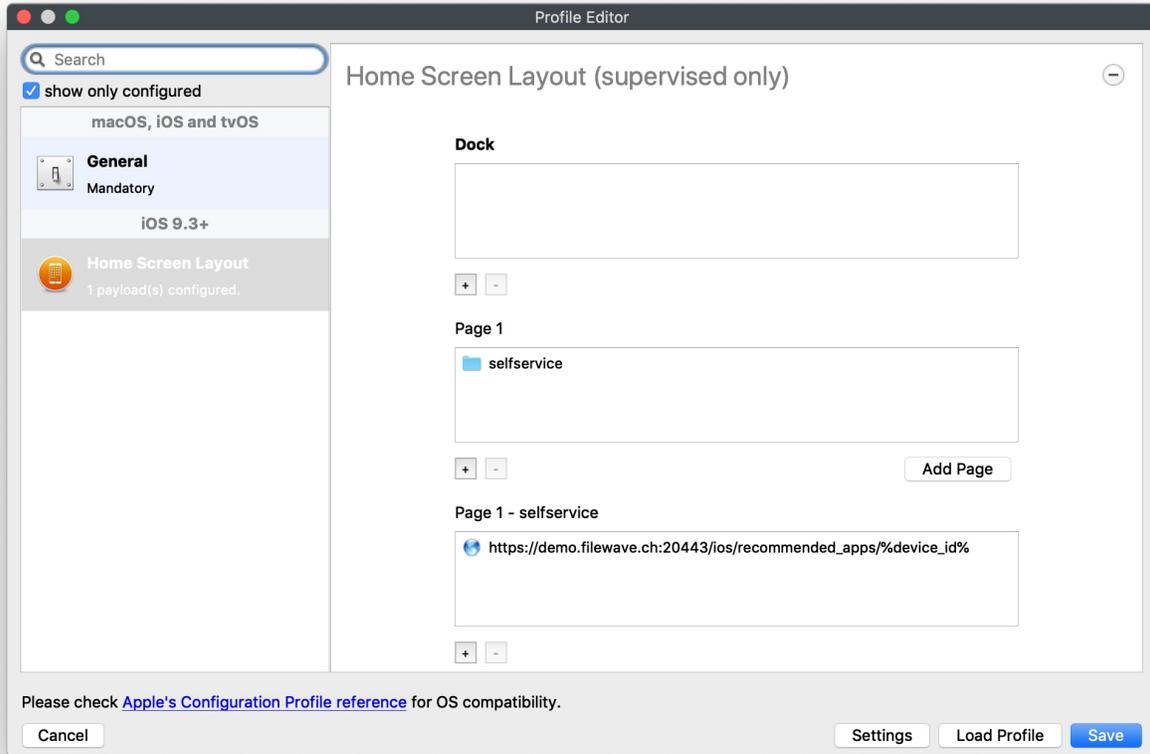

In this example:

```
https://demo.filewave.ch:20445/ios/recommended_apps/6a43efb044bb2e8bd19488cc47cfa62a39cdd04
```

becomes:

```
https://demo.filewave.ch:20445/ios/recommended_apps/%device_id%
```

Inject this into the home screen layout payload you are deploying, instead of an app name, and the App portal will be moved into that folder.
