

# Wacom Tablet Deployment (macOS Fileset Magic)

## Description

Installing the Wacom intuos drivers

 Last tested with WacomTablet 6.3.30

## Ingredients

- FW Central
- Latest Wacom intuos Installer - <https://www.wacom.com/en/products/intuos>

## Directions

1. Do a Fileset Magic capture
  - In /private/var/ the only thing you need is the db/receipts folder
2. Select the fileset and add a script attribute
  - Create a post-flight script macOS

```
#!/bin/bash
launchctl load /Library/LaunchAgents/com.wacom.wacomtablet.plist
launchctl start com.wacom.wacomtablet
launchctl load /Library/LaunchAgents/com.wacom.DataStoreMgr.plist
launchctl start com.wacom.DataStoreMgr
```

3. Save the fileset and deploy

 If 10.13 or greater you will also need to send a profile to allow the kernel extension: [User Approved MDM Enrollment \(macOS\)](#)
