

7zip (Windows MSI)

Description

Example recipe for deploying 7zip with new MSI parameters in FileWave 15.2.0.

Ingredients

- FW Admin
- 7zip MSI installer

i Be sure to review 7zip FAQs to use the proper install path. FileWave will force a silent install when using MSI installers.

Directions

1. Download the 7zip MSI installer from 7zip: [Download](#)
2. Upload MSI installer by creating New Desktop Fileset and choose MSI / PKG to create
3. Highlight the newly created MSI Fileset, and select Properties
4. Scroll down to the Custom MSI install options
5. Enter in the desired path for 7zip

The screenshot shows the 'Fileset Name: MSI - 7zip' window. The 'Revision' is '<default> (Initial Revision)'. The 'Properties' tab is selected, showing options for 'Requires Reboot', 'Force reboot', 'Authenticated restart', and 'Ignore Permissions on Existing Folders'. The 'Installation Priority' is set to 'Lowest'. The 'Verification settings' section has 'Ignore At Verify (Left Behind)' selected. The 'Custom MSI install options' field contains 'INSTALLDIR="C:\Program Files\7-Zip"'. The 'Use MSI uninstaller' checkbox is checked. The 'Custom MSI uninstall options' field is empty. The 'Cancel' and 'OK' buttons are at the bottom right.

- Example here is installing to C:\Program Files\7-Zip
6. Click OK to save

✓ Always test deployment for both successful installation and uninstallations. If you were assigning via Self Service Kiosk, and then end users decide to uninstall, want to be sure it does uninstall successfully.

Assign to Devices

Once testing has been completed and is successful, assign your Fileset to your devices. By way of either a 'Deployment' or 'Association' within FileWave, assign the Fileset to your devices.
