

Adobe Air (Windows EXE)

Description

Need to deploy Adobe Air onto your Windows machines? Here is what you need to know to make that fileset.

Ingredients

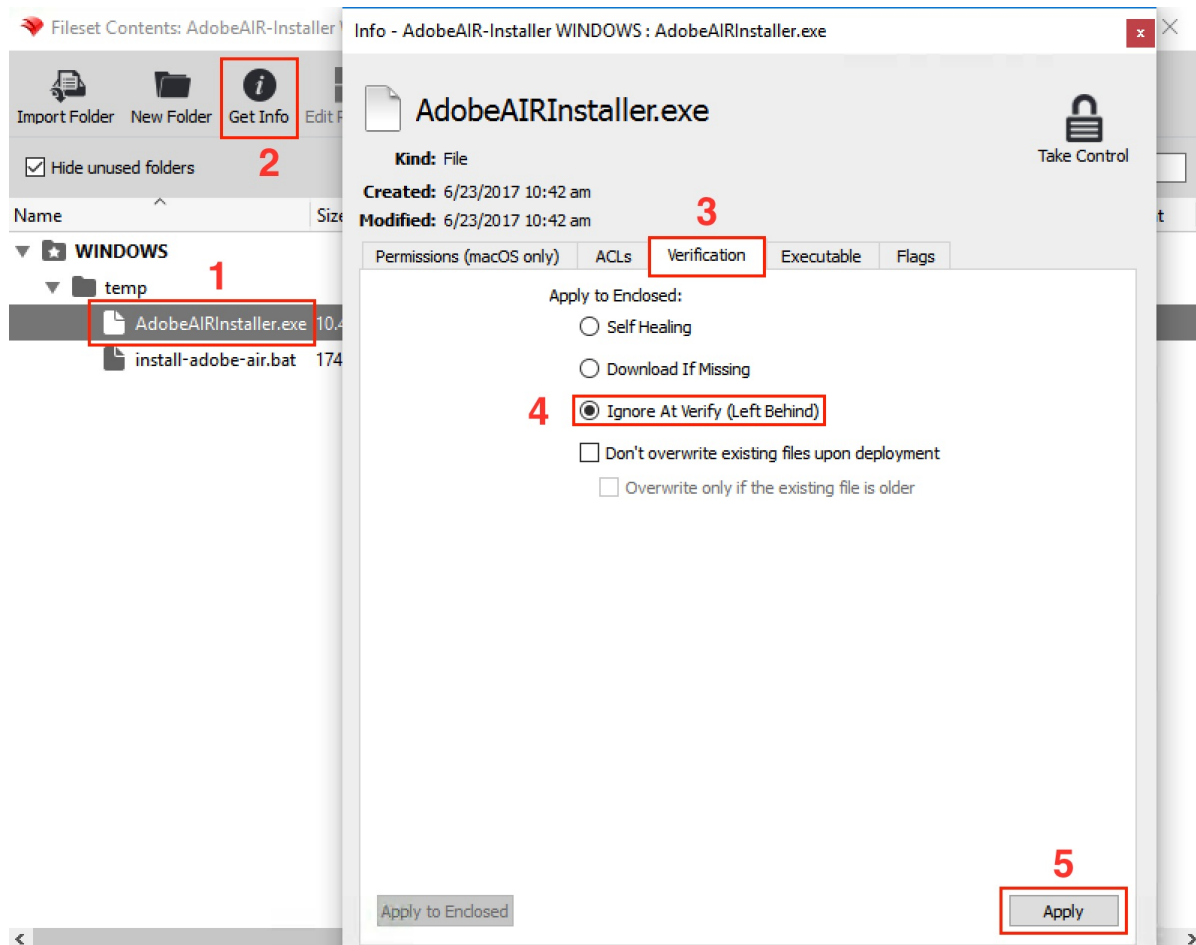

- Adobe Air installer
- FileWave Central

Directions

1. Download the most recent Adobe AIR Installer from <http://get.adobe.com/air/>
2. Extract and import the AdobeAIR-Installer.fileset.zip into FileWave Admin and open it. This fileset contains a script that calls the Adobe AIR Installer.
Starting the installation this way enables it to succeed even if no user is logged on at the target system.

```
start "" C:\Windows\temp\AdobeAIRInstaller.exe -silent
```

3. Import the "Adobe AIR Installer" into the C:\Windows\temp folder
4. Adjust the "Adobe AIR Installer.exe" verification settings to "Ignore at verify" using the "apply to enclosed" button as depicted below

5. Close the fileset and associate it to a test client
