

Adobe Air (Windows EXE)

Description

Need to deploy Adobe Air onto your Windows machines? Here is what you need to know to make that fileset.

Ingredients

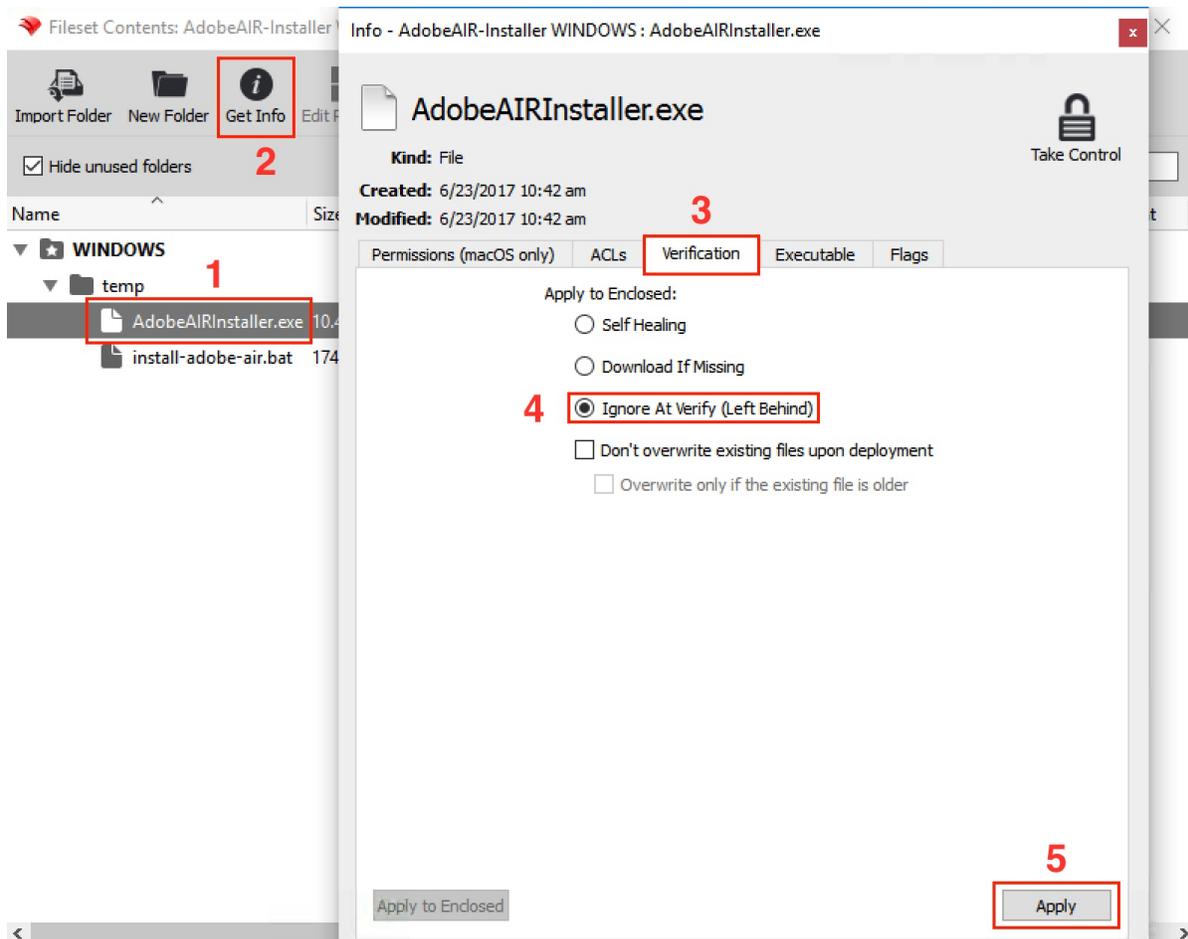

- Adobe Air installer
- FileWave Central

Directions

1. Download the most recent Adobe AIR Installer from <http://get.adobe.com/air/>
2. Extract and import the `AdobeAIR-Installer.fileset.zip` into FileWave Admin and open it. This fileset contains a script that calls the Adobe AIR Installer.
Starting the installation this way enables it to succeed even if no user is logged on at the target system.

```
start "" C:\Windows\temp\AdobeAIRInstaller.exe -silent
```

3. Import the "Adobe AIR Installer" into the `C:\Windows\temp` folder
4. Adjust the "Adobe AIR Installer.exe" verification settings to "Ignore at verify" using the "apply to enclosed" button as depicted below

5. Close the fileset and associate it to a test client
