

Add Network Search Domains using a script

Ingredients

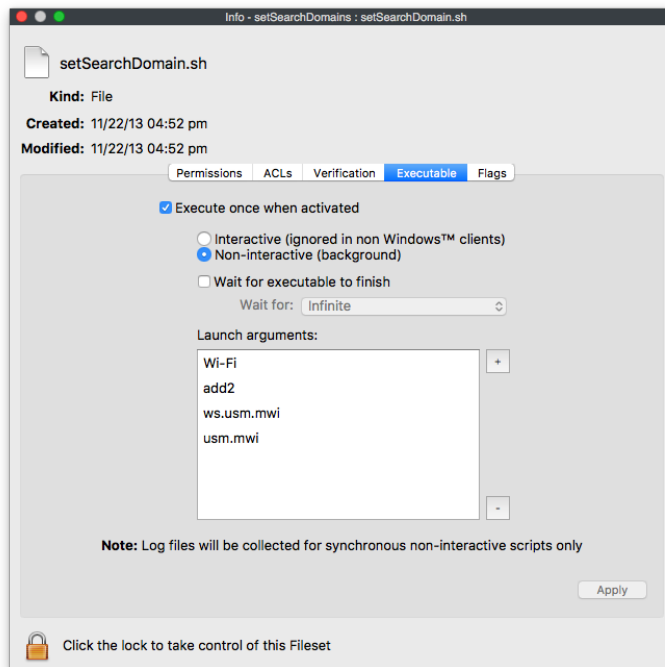

- FileWave Admin
- FileWave Clients (Mac only)

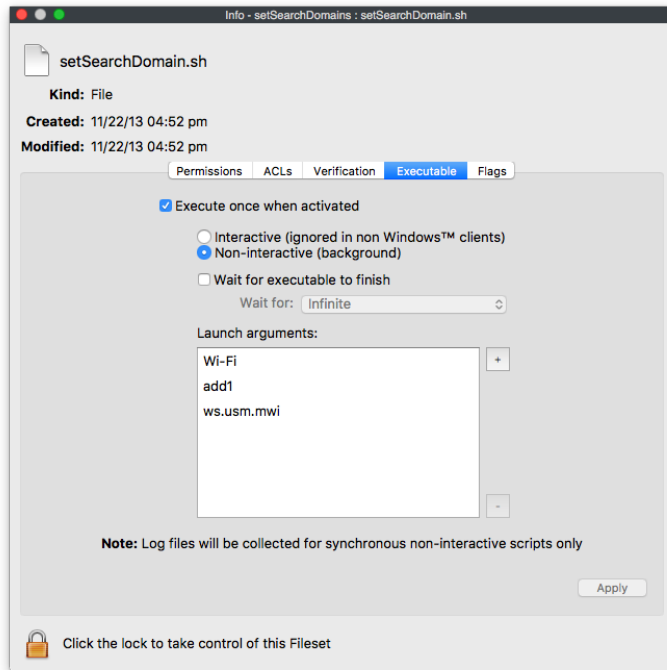

Description

Using the linked template Fileset you can add network search domain/s to your Mac clients. You can also use it to clear all search domains.

Directions

1. Download the template Fileset (See 'Attachments' at bottom)
2. Unzip and upload to FileWave Admin (drag & drop)
3. Double click on the Fileset to open
4. Browse to '/usr/local/etc'
5. Get info on 'setSearchDomain.sh' and add the proper arguments:
 - The First argument is the networkservice for example "Wi-Fi"
 - Second argument:
can be "clear" to clear all search domains
or add1 to add one domain or add2 to add two domains
 - **Note: add1 and add2 will clear any existing domains.**
 - see screenshots.

To find possible values for argument one you can run the below command on a Client machine to list network services available.
`networksetup -listallnetworkservices`

Notes

setSearchDomains.fileset.zip
