

Does Inventory report data about iOS devices ?

Yes and No

PROBLEM

Need to know about what information I can gather on iOS devices.

RESOLUTION

The Inventory tracks lots of the same information for all devices. Including what applications are installed where.

The exception with iOS devices is that we are unable to obtain application usage like:

- Average Time Used
- First Launched Date
- Installed Date
- Times Launched
- Total Time Used

ADDITIONAL INFORMATION

This limitation is because there isn't an actual client running on the iOS device, and that Apple's MDM protocol does not currently contain information about Usage.
